Discover

There's a sensitive payroll file open to the internet.

Want to fix that?

Classify

This file has sensitive information.

Shouldn't it be protected?

Protect

Source code shouldn't be shared to GenAI tools.

Want to set a DLP policy?

How are you identifying sensitive data today, especially in shadow apps?

What's the risk if an attacker finds it before you do?

Fortra DSPM helps you Discover a complete inventory of all sensitive data no matter where it lives or moves. We then automatically Classify data, identifying what's sensitive, regulated, or business-critical, and understanding its context.

Fortra goes beyond other DSPM vendors with our ability to then Protect your data with precision. This means enforcing the right security controls based on classification and reducing unnecessary access.

Fortra ensures that sensitive data stays safe whether in motion or at rest.

We give security teams visibility into where data is stored, how it's being accessed, and where it may be at risk to proactively reduce exposure.

Haunted by Ghost Data?

Exercise your cloud and SaaS apps with a free data risk assessment,

powered by Fortra DSPM.
